

CALCUDOKU

Math logic puzzles — no givens, deduce every digit from the cages

Bookatello Free Calcudoku Set 1

20 Calcudoku Puzzles

by Bookatello

How to Solve

Calcudoku blends Latin-square logic with simple arithmetic. Every puzzle has exactly one solution.

Instructions:

1. Fill every row and every column with the digits 1 to N (N is the grid size) — each digit once per row and column.
2. Cells are grouped into dashed CAGES. Each cage's corner shows a target and an operation, e.g. 12x, 7+, 3-, 2/.
3. The digits in a cage must produce its target using that operation. + adds, x multiplies; - and / are two-cell cages (the difference and the quotient, in either order).
4. There are no starting digits — every cell is deduced from the cage clues and the row/column rules.

Tip: a 2-cell 1- cage in a 5x5 could be 1&2, 2&3, 3&4, or 4&5 — let the row and column crossings narrow it down.
